RELATÓRIO DE ESTUDO DAS ÁREAS DE ARMAZENAMENTO DA CRX

Empresa: CRX Cargas e Encomendas Eireli

CNPJ: 01.421.223/0001-95

Áreas: sala perecível animal, sala perecível humana, sala de agendamento, base

entrada 01 e 02.

Refrigerador 01 e 02- sala perecível humana, Refrigerador 01- sala perecível animal.

Equipamento: Datalogger Temperatura E Umidade Ip-747 Impac

Início de estudo: 21/05/2024 Fim de Estudo: 04/06/2024

Introdução

Este relatório tem como objetivo demonstrar, por meio de evidências documentadas, que as áreas de armazenamento e transporte especificadas neste documento possuem condições técnico-operacionais adequadas para atender aos requisitos críticos necessários para o processo de conservação de produtos sensíveis à temperatura. A avaliação das condições de conservação dessas áreas é fundamental para garantir a integridade, qualidade e eficácia dos produtos armazenados e transportados, em conformidade com as regulamentações estabelecidas pela Resolução RDC 430 da Agência Nacional de Vigilância Sanitária (ANVISA).

A Resolução RDC 430 estabelece diretrizes para o armazenamento e transporte de produtos que requerem controle de temperatura, incluindo medicamentos, alimentos e produtos biológicos, visando garantir a segurança e a eficácia desses produtos durante todo o processo de armazenamento, manipulação e distribuição.

Neste contexto, este relatório abordará uma análise detalhada das condições de operação das áreas de armazenamento e transporte especificadas, destacando sua capacidade de manter temperaturas adequadas e estáveis dentro dos limites estabelecidos pela Resolução RDC 430. Serão apresentadas evidências documentadas, incluindo dados de monitoramento de temperatura e resultados de análises estatísticas, para respaldar a conclusão de que as áreas de armazenamento e transporte em questão atendem aos requisitos críticos para o processo de conservação.

A estrutura deste relatório incluirá uma descrição do problema, detalhando as áreas de armazenamento e transporte e os requisitos críticos de conservação, seguida por uma metodologia de análise. Posteriormente, serão apresentados os resultados da análise, seguidos de uma discussão sobre as implicações dos resultados. Por fim, será fornecida uma conclusão que resume os principais achados e destaca quaisquer recomendações pertinentes.

Data da elaboração: 10/06/2024

Objetivo

Demonstrar por meio de evidências documentadas que as áreas de armazenamento e transporte descritas neste relatório possuem condições técnico-operacionais adequadas para atender aos requisitos críticos requeridos para o processo de conservação de produtos sensíveis à temperatura.

Contexto

A Resolução da Diretoria Colegiada (RDC) nº 430, emitida pela Agência Nacional de Vigilância Sanitária (ANVISA), entrou em vigor em março de 2024, estabelecendo diretrizes específicas para o armazenamento e transporte de produtos sensíveis à temperatura. Antes da implementação desta resolução, não havia uma regulamentação específica que abordasse de maneira abrangente os requisitos críticos para o processo de conservação desses produtos.

Uma das principais características da Resolução RDC 430 é a exigência de que cada empresa realize seu próprio estudo e avaliação das condições de armazenamento e transporte, levando em consideração as características específicas de seus produtos e instalações. Isso significa que não há uma abordagem única ou padronizada para a conformidade com a regulamentação; ao contrário, cada empresa é responsável por desenvolver e implementar medidas adequadas para garantir a preservação da qualidade e segurança dos produtos sob sua responsabilidade.

Com a entrada em vigor da Resolução RDC 430, as empresas e organizações envolvidas no armazenamento e transporte de produtos sensíveis à temperatura passaram a ser obrigadas a cumprir requisitos rigorosos estabelecidos pela ANVISA. Esses requisitos incluem parâmetros específicos para o monitoramento e controle da temperatura em áreas de armazenamento e durante o transporte, com o objetivo de garantir a preservação das condições ideais de conservação dos produtos.

Diante desse novo cenário regulatório, torna-se ainda mais crucial que cada empresa realize uma avaliação cuidadosa das condições de operação de suas áreas de armazenamento e transporte, garantindo a conformidade com os requisitos estabelecidos pela Resolução RDC 430. Este relatório se propõe a fornecer uma análise detalhada dessas condições, apresentando evidências documentadas que respaldem a conformidade das áreas avaliadas com os requisitos críticos para o processo de conservação de produtos sensíveis à temperatura.

Data da elaboração: 10/06/2024

Finalidade

A finalidade deste relatório é verificar se as áreas de armazenamento e transporte cumprem os requisitos críticos de conservação de produtos sensíveis à temperatura, conforme estabelecido pela Resolução RDC 430 da ANVISA. Por meio de análises detalhadas e evidências documentadas, busca-se garantir a integridade, qualidade e eficácia dos produtos, assegurando a conformidade com as normas regulatórias e promovendo a implementação de medidas corretivas e preventivas, quando necessário.

DADOS das áreas de estudo

3 refrigeradores 2°C - 8 °C -

Refrigerador 01- sala perecível animal; Refrigerador 01- sala perecível humana; Refrigerador 02- sala perecível humana.

5 áreas de armazenamento 15°C - 30°C -

sala perecível animal; sala perecível humana; sala de agendamento; base entrada 01; base entrada 02.

INSTRUMENTO UTILIZADO

O Datalogger Temperatura E Umidade Ip-747 Impac

Mostrador: LCD multifunção 3 1/2 dígitos.

Contagens: 1999 contagens.

Faixa de medição da Umidade: 0 ~100%.

Faixa de medição da Temperatura: -40 ~ 70°C.

Resolução Umidade: 0,1%. Resolução Temperatura: 0,1ºC.

Precisão Umidade (0 \sim 20 e 80 \sim 100%): \pm 5%. Precisão Umidade (20 \sim 40 e 60 \sim 80%): \pm 3,5%.

Precisão Umidade (40 ~ 60%): ± 3%.

Precisão Temperatura (-40 ~ -10 e 40 ~ 70°C): ± 2°C.

Precisão Temperatura (-10 ~ 40°C): ± 1°C. Unidades de medida de Temperatura: °C e °F. Software datalogger: Compatível com Windows. Função Máximo e Mínimo: Sim, com alarme.

Temperatura de operação: 0°C ~ 40°C.

Temperatura de armazenamento: -10°C ~ 60°C.

Data da elaboração: 10/06/2024

Umidade de operação: <70%.

Umidade de Armazenamento: <80%. Alimentação: 1 bateria de 3,6V. Duração da bateria: de 2 a 3 meses.

Dimensões: 92 × 50 × 29 mm.

Comprimento do cabo USB: 2 metros.

Peso: 125 g incluindo bateria.

Peso embalado: 300 g.

Validade calibração: 22/08/2024

Metodologia

O estudo foi conduzido por meio da colocação alternada de data loggers em áreas designadas para armazenamento e transporte, seguindo um intervalo de 10 minutos para a coleta de dados. Cada data logger permaneceu em cada área por um período mínimo de 24 horas para garantir uma amostragem representativa das condições de temperatura ao longo do tempo. Após a coleta dos dados, foram realizadas análises estatísticas para avaliar a variação e estabilidade das temperaturas em cada área avaliada.

Aceitação de Desempenho para Refrigeradores:

Durante o estudo, a temperatura máxima encontrada em cada refrigerador deve ser igual ou menor que 8°C. Além disso, a temperatura mínima encontrada em cada refrigerador deve ser igual ou maior que 2°C.

Aceitação de Desempenho para Demais Áreas:

Durante o estudo, a temperatura máxima encontrada em cada área de armazenamento, excluindo os refrigeradores, deve ser igual ou menor que 30°C. Além disso, a temperatura mínima encontrada em cada área deve ser igual ou maior que 15°C.

Critério Geral

Durante o monitoramento do estudo serão toleradas fugas dos parâmetros, desde que avaliadas pela equipe de qualificação e justificadas criteriosamente e que não sejam causadas por falhas, mas por fatores externos ou atípicos ao sistema. Estas fugas não poderão também significar mais que 10% do número de medidas realizadas.

REALIZAÇÃO DOS ESTUDOS PARA QUALIFICAÇÃO

Qualificação de Desempenho (QD)

Número do teste:01 Início: 21/05/2024 Término:04/06/2024

Qualificação de Desempenho (QD)

Esta seção apresenta os valores obtidos na qualificação de desempenho das áreas de armazenamento e transporte. Esses dados foram utilizados como base da análise estatística do estudo para determinação do "status" das áreas avaliadas. Por meio da estatística descritiva, aplicada na próxima seção, resumiu-se de forma confiável e representativa as informações, o que permitiu uma determinação mais criteriosa da conclusão.

- count: o número total de observações de temperatura para cada local de refrigeração.
- mean: a média das temperaturas registradas.
- std: o desvio padrão das temperaturas, uma medida de quão dispersas estão em torno da média.
- min: a temperatura mínima registrada.
- 25%: o primeiro quartil, ou o valor abaixo do qual cai 25% dos dados.
- 50%: a mediana, ou o valor que separa a metade superior e inferior dos dados.
- 75%: o terceiro quartil, ou o valor abaixo do qual cai 75% dos dados.
- max: a temperatura máxima registrada.

local de refrigeração, "base entrada 01", como exemplo:

- count: 283.0 observações de temperatura foram registradas para este local.
- mean: a média das temperaturas é de aproximadamente 24.08°C.
- std: o desvio padrão das temperaturas é de cerca de 1.58°C.
- min: a temperatura mínima registrada é de 21.4°C.
- 25%: 25% das temperaturas registradas são menores ou iguais a 22.90°C.
- 50%: a mediana das temperaturas é de 24.0°C.
- 75%: 75% das temperaturas registradas são menores ou iguais a 25.2°C.
- max: a temperatura máxima registrada é de 27.3°C.

ELABORAÇÃO

CONCLUSÃO

Com base nos estudos de qualificação e na análise dos dados apresentados, conclui-se que as áreas de armazenamento foram apropriadamente qualificadas para suas funções. Os resultados indicam consistência e estabilidade nas condições de temperatura e umidade, dentro dos padrões estabelecidos. Assim, as áreas estão prontas para a conservação dos materiais conforme as especificações necessárias, demonstrando conformidade com os critérios de aceitação do relatório.
